

Missed milestones.
Underperforming initiatives.
Expensive delays.

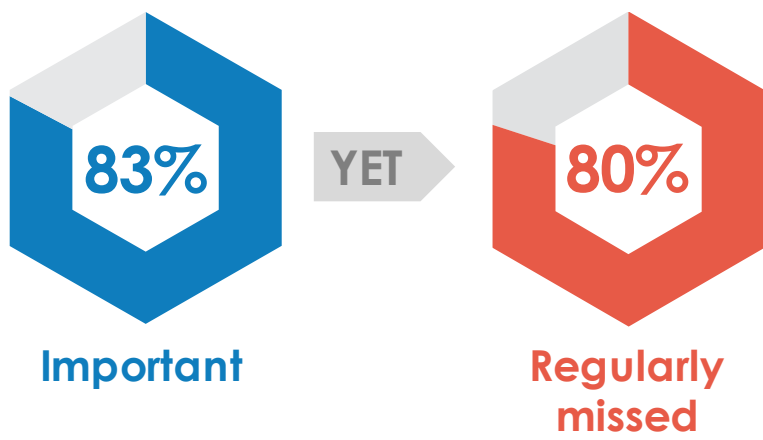

We surveyed **300 global clinical operations leaders** to learn more about how they manage trials.

Continuous quality, the speed to quality results across portfolios of clinical trials, is at once the **biggest challenge** and **opportunity**.

FINDINGS

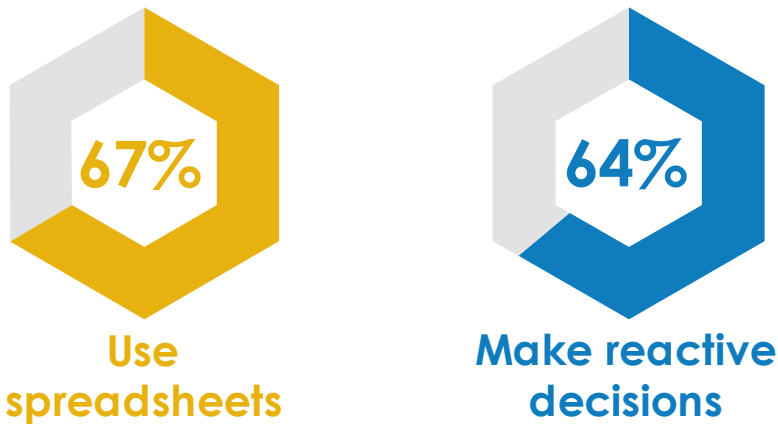

Milestone achievement is:

100% have **initiatives** to improve milestone achievement... but **less than 30%** believe they are **successful** in key milestone focus areas: enrollment, site productivity, and subject compliance.

Without real-time data, decisions are **reactive** and studies are **delayed**.

These **delays are expensive**. Each three-month CRO change order costs **80%** of respondents more than **\$100K**.

Fortunately, there is **industry consensus** on the **top three** system requirements to act faster across systems and studies:
